

Not every item in the *Research Connections* library links to a resource's free full text. Some search results provide only a citation. Others will link to a page where you can purchase the article. **But you can still try the methods below to get the publication for free.**

<p><b>Your University Library</b>        Are you affiliated with a university? If so, call your university library's reference desk and tell them about the publication you've found on <i>Research Connections</i>. They will get it for you.</p>	<p><b>Related Resources</b>        Sometimes an expensive journal article will also be published as a free gray literature publication. If it is, the <i>Research Connections</i> site will link to it in the Related Resources section just below the article's description.</p>
<p><b>Your State Library</b>        Every state has a library in its capital city. If you are a state employee, you can access the publication from your state library. If you are a resident the state you might still have access depending on their policies. <a href="#">Find your state library here</a> and contact its information desk for details.</p>	<p><b>Free Websites</b>  <a href="#">Google Scholar</a> might lead you to a free full text version of a publication. Once you scroll through the results and locate the correct publication, look to the right of the citation for access options. More general search engines also might lead you to an available copy if you scroll through several pages of results and try multiple links.* Browser extensions like Unpaywall and The Open Access Button can also reveal free available copies.</p>
<p><b>Your Local Public Library</b>        Many public libraries can find a copy of the publication you'd like to access. However, it could take some time because public libraries aren't accustomed to working with advanced research. Call your local public library's information desk for details.</p>	<p><b>Scholarly Social Media Platforms</b>        The author of the publication you want to read might participate in <a href="#">ResearchGate</a> or <a href="#">Academia.edu</a>. Authors sometimes make their publications available to all on these platforms, but you might need to create an account, connect with the author, and request a prepaid or specially licensed copy.</p>
<p><b>A Library Website or Consortium</b>        All libraries have websites where you'll find their online offerings. You'll have to sign in with your library card, but once you do, there's a chance you'll be able to navigate through the subscription databases they offer to find a copy of the publication you need.*</p>	<p><b>Via Email from the Author</b>        If you can find an email address for the publication's author, you might be able to request a prepaid or specially licensed copy. Authors are not obligated to provide one for you, but they often will be pleased to know you want to read their work. You may even forge a new professional connection.</p>
<p><b>Interlibrary Loan (ILL)</b>        All libraries can request publications through the interlibrary loan system. If a publication is in any library anywhere, chances are your local library can borrow a paper copy for you from another library. Show the <i>Research Connections</i> citation to any reference librarian and ask about interlibrary loan.</p>	<p><b>Ask a <i>Research Connections</i> Librarian</b>        The <i>Research Connections</i> team may be able to help you find a copy to read. Email us at <a href="mailto:ResearchConnections@icf.com">ResearchConnections@icf.com</a></p>

\*These options may result in access via a database or aggregator such as JSTOR, ProQuest, or EBSCO.
